for free but optimization sux. literally unplayable. I stayed at the loading of a match for 10 minutes and never loaded. I loved this game when it was on browser, I'll just wait until they make it playable. I dont understand how companies take years to release a game and then they release it full of bugs and issues.. Give developers time to fix this game it have unique gameplay and it didn't copy other tcg games like shadowverse copied hearthstone.. for free but optimization sux. I have been playing this game since it came out and its been great, now that its on steam even better.. game is closed
